

Hyperbaric Oxygen Therapy Brandon

Hyperbaric Oxygen Therapy Brandon - Therapy referred to as oxidative therapy is performed by introducing extra energy in the body. The three ways that this can be performed is to introduce oxygen within the body under pressure using Hyperbaric Oxygen, by mixing blood with ozone gas, or by infusing Hydrogen Peroxide or H₂O₂ in a vein. It only takes a little amount of Hydrogen Peroxide to be able to produce a large amount of oxygen, therefore, parts on the body that suffer from poor circulation can benefit very much from the supply of oxygen.

Oxidative therapy has been used ever since the 1920's, when Dr. T.H. Oliver first utilized Intravenous Hydrogen Peroxide during an outbreak of influenza. This successful treatment helped numerous individuals and the outcome were reported in a British medical journal, the lancet. Several years later, Dr. Charles Farr published a paper entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This paper has become the protocol for physicians who administer H₂O₂.

The theories surrounding this particular therapy vary in its explanation of the way this particular treatment works. Several scientists and researchers have discovered that the presence of H₂O₂ in the body is much more complex than initially believed. The benefits of Oxidative Therapy have been show useful for the following health illnesses: Cardiovascular Disease, Cerebrovascular Disease, Coronary spasm, Cardiac arrhythmia, Peripheral Vascular Disease, Asthma, COPD, Pulmonary Diseases, Raynaud's Phenomenon, Influenza, Chronic Bronchitis, Bronchiectasis, Herpes Simplex Virus, HIV, Lupus, Immune Disease, Multiple Sclerosis, Alzheimer's, Fibromyalgia, Chronic Fatigue, Rheumatoid Arthritis, Environmental Poisonings, Migraines, and Parkinson's Disease, amongst others.

Because oxidation is a really important energy producing chemical response in the body which utilizes various types of oxygen, the treatment must be carefully controlled so as to prevent damage to surrounding normal tissue. Anti-oxidants in the form of vitamins and enzymes protect the body from oxidative damage. Nonetheless, the immune system utilizes oxidative energy as a weapon to be able to directly kill infectious agents like for instance yeast, bacteria, parasites and viruses.
