

Acupuncturist in Brandon

Acupuncturist in Brandon - IV therapy or also known as Intravenous therapy is the placing of substances directly into a vein. IV therapy has been utilized to be able to correct electrolyte imbalances and to be able to deliver medications in blood transfusions. It can also be utilized as fluid replacement to correct, like for example, dehydration. The intravenous route is the fastest way so as to deliver medications and fluids throughout the body. Some medications, in addition to lethal injections and blood transfusions, can only be given intravenously.

Vitamin C Intravenous therapy is an alternative remedy for conditions like cancer. Many centers dedicate certain treatment regimens, even though there is still some controversy surrounding this particular type of remedy. Some of the reputed benefits of Vitamin C therapy include: increasing the quality of life and prolonging survival. Vitamin C is helpful in preventing systemic free radical injury and corrects an ascorbate deficiency, that is usually found in individuals who have cancer. Vitamin C inhibits hyaluronidase. This is an enzyme made by cancer cells that is responsible for the breakdown of healthy tissue, resulting in tumor progression and metastasis. Vitamin C likewise works synergistically conventional with different traditional cancer treatments.

Different names for Vitamin C, include: L-ascorbic acid or L-ascorbate. It is an essential nutrient for human beings and different animals. It is a prime antioxidant and protects the body against stress due to oxidation. Vitamin C is also a co-factor in at least 8 enzymatic reactions comprising various collagen synthesis reactions which lead to the most severe signs of scurvy when they are not working correctly. In animals, these enzyme reactions are very vital in preventing bleeding from capillaries and wound-healing.

Vitamin C Mega Dosage

There are several organizations and people who advocate large doses of Vitamin C, in excess of ten to one hundred times over the Recommended Daily Intake or RDI. They take these amounts either orally or intravenous therapy. There have yet to be randomized, large clinical trials on the circumstances of high doses performed on the general population. Linus Pauling spent a large portion of his life advocating the use of mega doses of vitamin C. He thought the established RDA was adequate to prevent scurvy but not necessarily a high enough dosage for optimal health.

Mega doses of vitamin C have been used in the treatment and prevention of various illnesses consisting of cancer, coronary disease and the common cold. Current RDI for vitamin C is 60 mg although, several references quote at least 30 mg and others state we must have a minimum of 100 mg on a daily basis. Individuals taking a mega dose can ingest anywhere from 500mg to 1000 mg per day but the side effect of diarrhoea may be a common issue for people who ingest large amounts.
